Application No. 09/346,470 Amendment dated July 10, 2006

Response to Office Action of January 9, 2006

## In the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## 1-78. Canceled

- 79. (Previously presented) An isolated nucleic acid molecule comprising a nucleotide sequence which encodes or is complementary to a sequence which encodes an ecdysteroid receptor (EcR) polypeptide that binds ecdysone, wherein the encoded EcR polypeptide consists essentially-of the amino acid sequence set forth in SEQ ID NO:10.
- (Previously presented) The isolated nucleic acid molecule of claim 79, wherein said sequence consists essentially of the nucleotide sequence set forth in SEQ ID NO:9.
- 81. (Previously presented) The isolated nucleic acid molecule of claim 79, wherein the isolated nucleic acid molecule further encodes an EcR partner protein (USP polypeptide) of a *Myzus persicae* EcR heterodimer, which USP polypeptide consists essentially of an amino acid sequence as set forth in SEQ ID NO:12.
- (Previously presented) The isolated nucleic acid molecule of claim 81, wherein the USP polypeptide is encoded by the nucleic acid sequence set forth in SEQ ID NO:11.
- (Previously presented) The isolated nucleic acid molecule of claim 81, wherein the USP polypeptide is identical to that encoded by cDNA present in plasmid pMpUSP (AGAL Accession No. NM99/04568).

Application No. 09/346,470 Amendment dated July 10, 2006

Response to Office Action of January 9, 2006

 (Previously presented) The isolated nucleic acid molecule of claim 79, wherein said polypeptide consists of an amino acid sequence encoded by a cDNA present in the plasmid deposited under AGAL Accession No. NM99/04567.

85. (Previously amended) An isolated nucleic acid molecule comprising a nucleotide sequence which encodes or is complementary to a sequence which encodes an ecdysteroid receptor (EcR) polypeptide that binds ecdysone, when said EcR polypeptide is in association with a USP polypeptide, said EcR polypeptide consisting of an amino acid sequence substantially identical to the amino acid sequence set forth in SEQ ID NO:10, wherein said encoded EcR polypeptide is not a *Drosophila melanogaster* EcR polypeptide.

86-87. (Canceled)

- (Previously presented) The isolated nucleic acid molecule of claim 85, wherein the EcR polypeptide is derived from a member of the genus Myzus.
- (Previously presented) The isolated nucleic acid molecule of claim 85, wherein the insect is Myzus persicae.
- 90. (Currently amended) The isolated nucleic acid molecule of claim 85, wherein the isolated nucleic acid molecule further encodes and an EcR partner protein (USP polypeptide) of the M. persicae EcR polypeptide, wherein the USP polypeptide consists essentially of an amino acid sequence set forth in SEQ ID NO:12.
- (Previously presented) A genetic construct comprising the isolated nucleic acid molecule of claim 79, wherein said nucleotide sequence is operably linked to a promoter sequence.

3

Application No. 09/346,470 Amendment dated July 10, 2006

Response to Office Action of January 9, 2006

- (Previously presented) The genetic construct of claim 91, wherein said promoter sequence is a MMTV, SV40, polyhedrin or p10 promoter sequence.
- 93. (Previously presented) A cell comprising the genetic construct of claim 91.
- 94. (Previously presented) The cell of claim 93, wherein the cell further comprises a nucleic acid molecule encoding an ecdysteroid receptor partner protein (USP polypeptide) which is expressed in said cell.
- 95. (Previously amended) An isolated nucleic acid molecule comprising a nucleotide sequence which encodes a ecdysteroid receptor (EcR) polypeptide, wherein said ecdysteroid receptor polypeptide is not from *Drosophila melanogaster*, wherein said EcR polypeptide binds ecdysone, and wherein said nucleotide sequence is substantially identical to the nucleotide sequence set forth in SEQ ID NO:9 or a sequence complementary to said sequence.
